Jewelry designer **Yuliya Kutovaya** presents the new **Lagan Osmium** collection, created in collaboration with the **Osmium Institute**. The collection embodies a **contemporary approach to design**, merging **tradition with innovation**.

At the core of the concept lies the **aesthetic of traditional Eastern culture** combined with the uniqueness of **osmium** as an **innovative jewelry material**.

–Yuliya Kutovaya Said:

“The idea for the collection originated from the image of the **Uzbek lagan** – a round, decorated serving plate traditionally placed at the center of the table, around which guests gather. In my imagination, I sought to unite this symbol of **Eastern hospitality** with a material that represents something truly unique and captivating. **Osmium** became a metaphor for the **central element** around which form and ornament are built.”

Crystalline osmium is an **innovative platinum group metal** – the **rarest and densest precious metal in the world**. It is highly resistant to external influences, and its natural structure does not require cutting.

The **Lagan Osmium** pieces are adorned with the refined vegetal “**Islimi**” pattern – a **traditional Eastern ornament** commonly found in wood carving. The **tactile relief** of the jewelry conveys the sensation of **natural surfaces**, while the **contemporary interpretation** of the ornament reflects the **artistic heritage of Uzbekistan**.

The design allows for **transformation**: the **central osmium element** can be easily removed.

The collection already has its own story. Last year, **Yuliya Kutovaya** presented her design at the **Osmium Visionary Contest in Germany** and subsequently continued her creative collaboration with the **Osmium Institute**. The collection will be showcased in **May** at the international exhibition **GemGenève in Switzerland**.
